Basics

Hello World

```
console.log("Hello, JavaScript!");
```

Variables

```
let name = "Sophea";
const year = 2025;
let age = 20;
```

if Statement

```
if (age >= 18) {
  console.log("Adult");
}
```

Loops

```
for (let i = 0; i < 5; i++) {
  console.log(i);
}
```

DOM

```
document.querySelector("button")
  .addEventListener("click",
    () => {
      console.log("Button
        clicked");
    });
```

5. Arrays

```
let fruits = ["apple", "banana"];

// Methods
fruits.push("mango");
fruits.pop();
fruits.shift();
fruits.unshift("kiwi");
fruits.includes("banana");
fruits.indexOf("apple");

// Iteration
fruits.forEach(f => console.log(f));
let newArr = fruits.map(f => f.toUpperCase());
let filtered = fruits.filter(f => f !== "banana");

// Spread
let all = [...fruits, "grape"];
```

6. Objects

```
let user = {
  name: "John",
  age: 25,
  greet() {
    return `Hi, ${this.name}`;
  }
};

console.log(user.name);
delete user.age;

// Destructuring
const { name } = user;
```

Functions

```
function greet() {
  console.log("Hello!");
  greet();
}
```

Arrow Function

```
const add = (a, b) =>
  return a + b;
```

Array & Objects

Array Methods

```
const numbers = [1, 2, 3];
const doubled = numbers
  map(n => n * 2);
```

Object Literal

```
const person = {
  name: "Sophea", age: 20
}
```

```
const age = 18;

if (age >= 18) {
  console.log("Nick is an adult.");
} else {
  console.log("Nick is a child.");
}
```

```
const age = 18;

if (age < 18) {
  console.log("Alice is under 18 years old.");
} else if (age >= 18 && age <= 21) {
  console.log("Alice is between the ages of 18 and 21.");
} else {
  console.log("Alice is over 21 years old.");
}
```

```
1 const numbers = [22, 34, 46, 58];
2 let i = 0;
3 do {
4   console.log(numbers[i] * 2);
5   i++;
6 } while (i < numbers.length)
```

Javascript Events

```
onclick, oncontextmenu, ondblclick,
onmousedown, onmouseenter, onmouseleave,
onmousemove, onmouseover, onmouseout,
onmouseup
```

2. Control Structures

if-else

```
if (a > b) {
  console.log("A");
} else {
  console.log("B");
}
```

switch

```
switch (day) {
  case 1: console.log("Mon"); break;
  default: console.log("Other");
}
```

loops

```
for (let i = 0; i < 5; i++) {}
while (condition) {}
do {} while (condition);
```

```
1 const numbers = [22, 34, 46, 58];
2
3 for (let i = 0; i < numbers.length; i++) {
4   console.log(numbers[i] * 2);
5 }
6
7 // Result: 44 68 92 116
```

```
1 const numbers = [22, 34, 46, 58];
2 let i = 0;
3 while (i < numbers.length) {
4   console.log(numbers[i] * 2);
5   i++;
6 }
7
```

Linking & Imports

- <link rel="stylesheet" href="">
- <link rel="icon" href="">
- <style>

3. Operators

```
+ - * / % ** // arithmetic
== === != !== // equality
< <= > >= // comparison
&& || ! // logical
= += -= *= // assignment
```

4. Functions

```
function greet(name) {
  return `Hi, ${name}`;
}

// Arrow Function
const sum = (a, b) => a + b;

// Default Parameters
function greet(name = "Guest") {}

// Rest Parameters
function total(...nums) {
  return nums.reduce((a, b) => a + b);
}
```

11. Useful Methods

```
// Array
arr.reduce((a, b) => a + b);
arr.find(e => e === 3);
arr.every(e => e > 0);
arr.some(e => e === 2);

// String
str.includes("H");
str.split(" ");
str.toUpperCase();
str.replace("H", "h");

// Number
parseInt("123");
parseFloat("12.3");

// Object
Object.keys(obj);
Object.values(obj);
Object.entries(obj);
```
